

## Mesh Replacement for SunPro Motorized Screens

Our motorized screens use the finest materials on the market and are designed to last a long time. However, accidents happen. For SunPro, Mesh replacement is not a big deal. For a relatively small cost, the mesh on any motorized screen can be easily replaced.

The good news is that we retain every order in our software. If your dealer contacts us with your last name and the approximate date of first install, we can retrieve the original order and manufacture the replacement mesh to the exact specifications of the original. We do this very quickly and have you enjoying your screen again in no time.

For dealers, if you would like to order replacement mesh for screens that we did not manufacture, provide us with tip to tip measurements (not the screen but the hood/ housing) and who manufactured the product and we can in most cases manufacture the screen.
